Juvenile Myositis (JM) is a group of rare and life-threatening diseases affecting about 4,000 children in the United States. Juvenile Dermatomyositis is the most common form of JM.

Symptoms of JM include:
• Muscle Weakness and Pain
• Severe Fatigue
• Swallowing and Digestive Difficulties
• Rashes
• Calcinosis and Vasculitic Ulcers
• Lung and Heart Problems

HELP US FIND A CURE!

CureJM Foundation
www.curejm.org
A 501(c)(3) nonprofit organization focused on finding a cure and better treatments for Juvenile Myositis and improving the lives of families affected by JM. To learn more or to make a donation, visit www.curejm.org
